HOA SEN UNIVERSITY | FACULTY OF TECHNOLOGY

RESPECT DIVERSITY

WEEK 3 — LECTURE

ĐẠI HỌC HOA SEN

TÔN TRỌNG SỰ KHÁC BIỆT

Week 3: Turning Interview Evidence into an AS-IS Process Draft

Course: Business Systems Analysis

Instructor: MSc. Nguyen Thi Thanh Thanh

Faculty: Faculty of Technology

Where are we in the project?

LAST WEEK

- Activities
- Actors
- Information
- Handoffs
- Exceptions
- Current tools/workarounds

THIS WEEK

- Turn interview evidence into a coherent draft of the current process.

Interviews give us pieces — not the picture.

"Sales sends the order over… then Warehouse checks it. Unless stock is low."

FRAGMENTED EVIDENCE

- WHAT happens?
- WHO does it?
- IN WHAT order?
- WHAT information?
- WHO receives results?

AS-IS = reality, not the ideal.

A description of how a process is performed today — including the inconvenient parts.

MANUAL WORK

SPREADSHEETS

EMAILS

WORKAROUNDS

DELAYS & EXCEPTIONS

Current evidence ≠ future ambition

AS-IS

CURRENT STATE

Evidence-based
Includes workarounds
Shows what happens now

Sales messages
Warehouse

TO-BE

FUTURE STATE

Analysis-led
Includes improvements
Shows what should happen

Sales checks real-time stock

Six elements to extract from evidence

01 TRIGGER

starts the process

02 ACTOR

performs the work
WHO does it? (Person or System)

03 ACTIVITY

does something observable
WHAT action is being performed?

04 INFORMATION

is used or produced
WHAT data goes in and comes out?

05 HANDOFF

moves work onward
HOW is work passed to the next step?

06 EXCEPTION

changes the normal path
WHAT if something goes wrong?

WHO does **WHAT**, using **WHAT DATA**, to **HAND OFF** to the **NEXT STEP**?

Extract the structure hidden in a quote

“When a customer order arrives, Sales emails the order sheet to Warehouse. Warehouse checks stock. If unavailable, they may contact Purchasing.”

INTERVIEW EVIDENCE

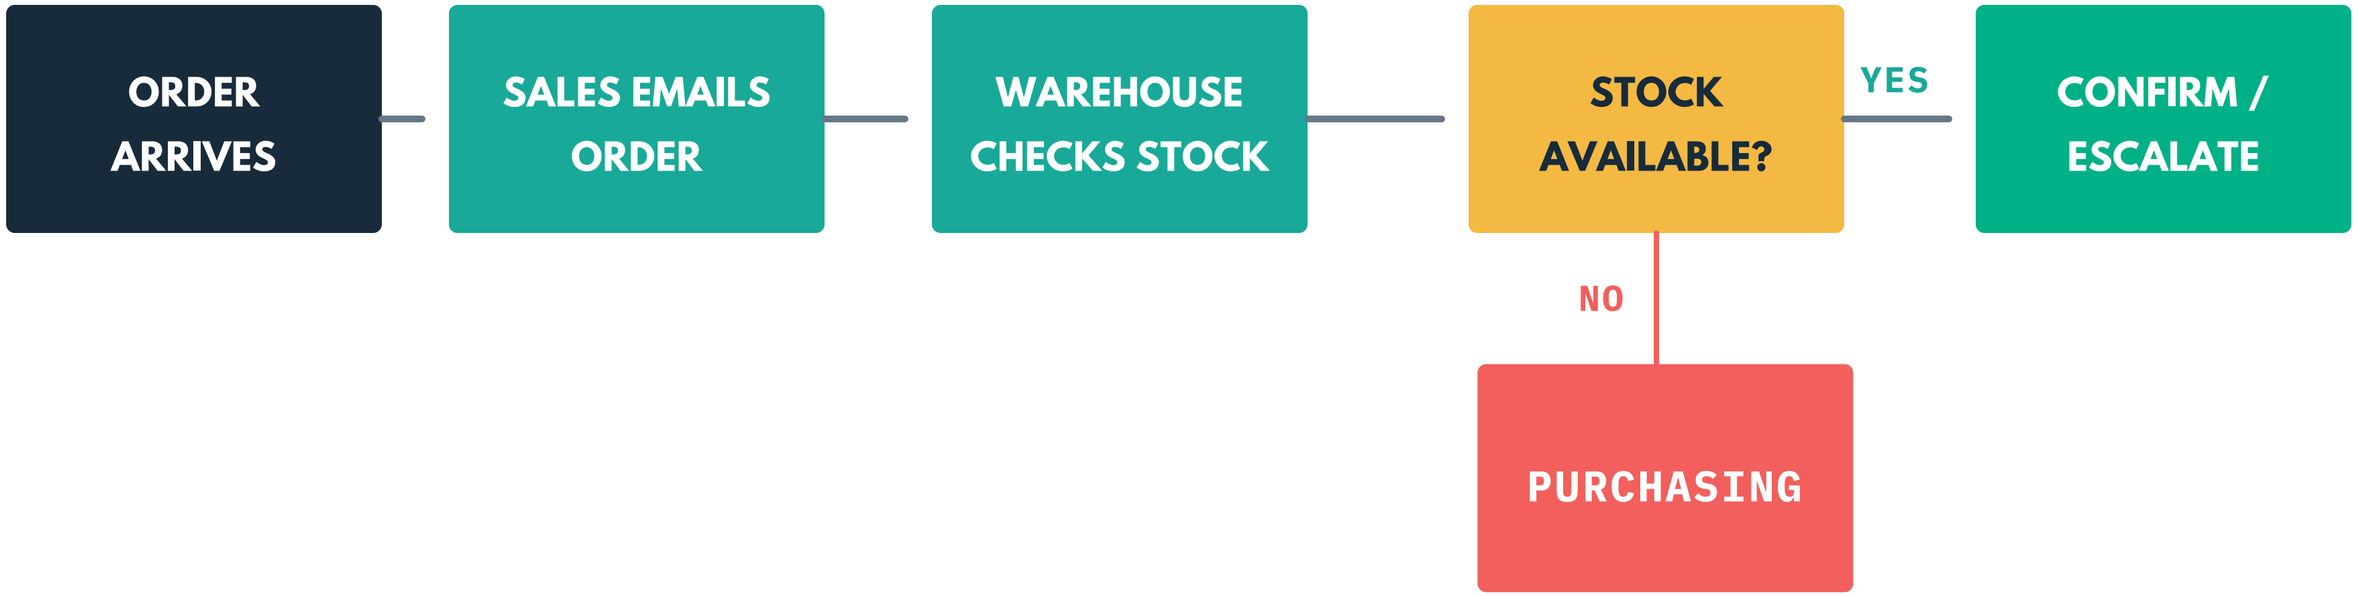

TRIGGER	Customer order arrives
ACTORS	Sales, Warehouse, Purchasing
ACTIVITIES	Email order; check stock; contact Purchasing
INFO	Order sheet; stock availability
HANDOFF	Sales → Warehouse
EXCEPTION	Stock unavailable

Table first. Flowchart second.

STEP	ACTOR	ACTIVITY	INFORMATION	HANDOFF
1	Sales	Receive order	Customer order	—
2	Sales	Email order sheet	Order sheet	Sales → Warehouse
3	Warehouse	Check stock	Stock record	—
4	Warehouse	Confirm / escalate	Availability	Warehouse → Sales / Purchasing

A process table exposes missing steps, unclear actors, sequence gaps, information and handoffs.

Draft the simplest flow that tells the truth

Clarity beats notation. Capture sequence and decisions first.

Do we need BPMN now?

NOT YET

Pools • Lanes • Gateways • Formal symbols

YES, NOW

Actors • Activities • Sequence • Decisions

Understand and organize the process before formalizing it.

Evidence, uncertainty and assumptions are not interchangeable.

CONFIRMED

Directly supported by stakeholder evidence.

UNCERTAIN

Incomplete, ambiguous or inconsistent information.

ASSUMPTION

A team belief that has not been verified.

Label what you know. Flag what you do not.

Do not upgrade “sometimes” into “always.”

STAKEHOLDER: “Sometimes Warehouse contacts Purchasing.”

CORRECT

Warehouse may contact Purchasing.

Confirmed possibility; frequency remains uncertain.

INCORRECT

Warehouse always contacts Purchasing.

Turns an unverified assumption into a fact.

Keep the AS-IS clean: no solutions yet.

- ✗ IMPLEMENT AN ERP
- ✗ BUILD A DASHBOARD
- ✗ AUTOMATE APPROVALS

THIS WEEK: document current reality. NEXT: diagnose before designing.

Our analysis sequence

Transforming evidence into an AS-IS draft

Choose a process you can actually see end-to-end.

TOO BROAD

Manage Sales

MANAGEABLE

Customer Order Fulfillment

Inventory Replenishment

Where does it start? Where does it end?

AS-IS quality checklist

- [x] Clear scope
- [x] Start & end points
- [x] Actors identified
- [ ] Activities observable
- [ ] Sequence makes sense
- [ ] Handoffs visible
- [ ] Information captured
- [ ] Exceptions shown
- [ ] Evidence-based
- [ ] Assumptions marked
- [ ] No TO-BE elements

Activity 1 — Individual evidence extraction

15

MINUTES

Identify

Trigger • Actors • Activities
Information • Handoffs • Exceptions

Then complete your process table.

Activity 2 — Build one shared AS-IS draft

40 MIN

1 Select a process

2 Define start and end

3 Identify actors & activities

4 Add information & handoffs

5 Capture exceptions

6 Draw a simple flow

Activity 3 — Peer review the story of the process

10 MIN

CAN YOU FOLLOW IT?

- Clear scope
- Logical sequence
- Actors & handoffs visible
- Evidence ≠ assumptions
- No TO-BE elements

Evidence becomes useful when it becomes a process.

W2 What did stakeholders say?

W3 How does it fit as the current process?

W4 Where are the problems and information needs?

Thank you! Questions?
